STYLE

Fit-Reform styles are creations. They express the trend of fashion in an authoritative way. They reflect what is absolutely new, and still keep within the bounds of good taste.

One of the very nice things about Fit-Reform Suits and Overcoats is their certainty of correctness. They are always right, in style as well as in quality and tailoring.

FIT-REFORM

444 ST. CATHERINE STREET WEST

GRADUATE WHO WON CROSS IS AMONG MISSING

2nd Lieut. Anderson, Sci. '10,
Believed Killed.

OTHERS ON HONOUR ROLL.

Capt. W. B. McTaggart, Undergraduate in Science, Wounded For Second Time.

Second Lieut. Goldie Fraser Anderson, Sci. '10, the winner of the Military Cross for gallant and distinguished conduct while with the Royal Engineers, has been missing since July 19, and it is believed was killed on that date, according to information which has been received at the University. 2nd Lieut. Anderson was born in Vancouver, B.C., and after graduation from McGill with the class of Science '10, was connected with the water power development work of the Coteau Power Company at Lumby, B.C. In 1914, shortly after the declaration of war, he returned to McGill to take up post graduate work. He became a member of the University Contingent C.O.T.C., when it was reorganized by Major A. C. Geddes, and about February, 1915, went to England, where he secured a commission in the Royal Engineers. He was last heard from by Prof. E. Brown in May last, when he wrote announcing that he had been awarded the Military Cross. On July 19 he was reported missing. He was last seen by a fellow officer while engaged in special work in No Man's Land. The enemy secured the range of his position, and he was missing when the roll was called.

2nd Lieut. A. L. Levick.

Private advices received at the University tell of the death in action in the recent fighting on the Somme front of 2nd Lieut. Arthur Lascelles Levick, Arts '17 and Sci. '18, serving with one of the British regiments which have taken a large share in recent operations. 2nd Lieut. Levick was born in Dunbar, Natal, on April 4, 1894, the son of J. A. Levick. While in Montreal he resided in the Park Mance apartment, Esplanade. He played English Rugby with the McGill team in the fall of 1913.

2nd Lieut. D. H. Bellamy.

When he was seriously wounded in Macedonia recently, 2nd Lieut. David Humphrey Bellamy, Arts '17, was second lieutenant in the 10th Devonshire Regiment. He is now undergoing treatment at Osborne, Isle of Wight, where a former classmate, Lieut. H. A. Lalanne, 60th Battalion, C.E.F., is also a patient. 2nd Lieut. Bellamy was born in Colombo, Ceylon, in 1895, and is a son of C. O. Bellamy, Crapstone, South Devon.

Capt. W. B. McTaggart.

For the second time since he went overseas with the 12th Battery, 3rd Artillery Brigade, First Canadian Division, the name of Captain W. Broder McTaggart, a student of Science '15, appears in the casualty lists. In yesterday's list he was reported as wounded. Capt. McTaggart, who was a graduate of the Royal Military College with honors, came to McGill to take a course in Engineering. He was at his home in Clinton, Ont., when war was declared, and being a lieutenant in the militia, immediately volunteered his services. He was accepted as a subaltern in the 3rd Artillery Brigade, and went overseas with the First Division. Last year he was reported wounded and was removed to England for recovery. When he returned to the front he was promoted captain. Capt. McTaggart took first place in his class at the graduation at the Royal Military College, and also won the Governor-General's gold medal. He is the son of George D. McTaggart, of McTaggart Brothers, bankers, Clinton, Ont.

Major G. S. Mothersill.

After nearly two years' service in France, Major George Sydney Mothersill, Med. '02, has been wounded. His name appears in yesterday's list. Major Mothersill went overseas with a medical unit of the First Canadian Division. His home is in Ottawa.

PRACTICE FOR SPORTS.

A fair crowd of prospective competitors in Friday's University meet came out to practice yesterday, despite the poor weather, and some good work was done. "Don" Smelzer was out for the sprints, weights and jumps; Hillier, sprints; Davis, sprints and jumps; Sutherland, weights and jumps; Windsor, jumps; Gerrie and Chappell for the distances. The entries for the meet are now open, and lists are to be found in the Union and Strathcona Hall. The entries close on Thursday at 6 p.m., and no entries will be accepted after this time.

ARTS '18 ELECT OFFICERS.

The first meeting of Arts '18 for the session 1916-17, was held in the Reading Room of the Arts Building on Friday last. V. S. Green, last year's president, opened the meeting. The chief business was the election of officers.

The following were elected: President—V. Green. Vice-President—K. P. Tsolainos. Secretary—W. E. Blampin. Treasurer—L. S. Henry.

PROF. MORIN IS NOW OFFICER OF ACADEMY.

On the proposal of M. C. E. Bonin, Consul General for France, Prof. Joseph L. Morin, of the Department of Modern Languages, Faculty of Arts, has been appointed by the French Government an officer of the Academy. This is a high distinction, and one which Prof. Morin, who is a graduate of McGill of the class of Arts '82, fully deserves. Prof. Morin has been connected with the teaching staff of the Faculty of Arts for a number of years.

ANNUAL HARVARD GAME.

An invitation has been received by the Hockey Club to play a game in Boston. The occasion of this game is known as Canadian night, when several thousand graduates and Canadians turn out to root for McGill. This game will be played on the annual trip to Boston and New York.

WARN STUDENTS ABOUT DISORDER ON SPORTS' DAY

Avoid Damage and Personal Injury, says Students' Council

RESOLUTION IS ADOPTED.

"Open" Meetings Will Be The Rule at Future Regular Sessions of the Council.

At the meeting of the Students' Council held at the McGill Union last evening, the following resolution was adopted:

Whereas for many years past it has been the custom for a struggle of some nature or other to take place between the Freshmen and Sophomores on the day set aside by the University for the holding of the inter-class sports; and

Whereas in these former struggles damage has been known to have been caused on more than one occasion to both property and persons; and

Whereas the destruction of property and the injury of persons is not in harmony with the spirit of this year's sports, and is directly adverse to the best interests of the student body, and of the University; and

Whereas the Students' Council, although expressly disclaiming any responsibility for damage caused by the students on this or on any other occasion, includes among its functions the taking of whatever steps it may be possible for them to take to regulate the conduct of the students on all occasions in such a way as to see that the best interests of the student body of the University is most carefully protected;

BE IT RESOLVED—
(1) That the Students' Council, while not objecting to friendly exchanges between the Freshmen and Sophomores years on Sports' Day, hereby expresses its disapproval of the introduction into such a contest of any features which tend to involve the destruction of property or the infliction of personal injury. Likewise any conduct of such a nature as would tend to reflect discredit upon the student body or of the University at large.
(2) That a copy of this resolution be placed in the hands of the editor of the McGill Daily with the request that it may be given a place in the columns of our paper.

W. T. Donnelly, president of Med. '21; J. A. McDougall, president, Med. '20; R. R. Fitzgerald, president, Arts '19; J. D. King, president, Sci. '20, and W. E. McLean, president, Arts '20, and T. J. C. Heeney, president, Science, '19, were in attendance and urged by Frank B. Common, M.A., Law '17, president of the Students' Council, to use all their influence and discretion in observing the various clauses in the above resolution.

After years of discussion, the Students' Council last night moved in favour of "open" meetings, the following resolution being adopted:—

Moved by S. J. W. Liddy, seconded by A. H. Greenwood, that, commencing with the next regular meeting of the Council, undergraduates shall be admitted to all regular meetings. Students so admitted shall not be permitted to take part in the discussions and proceedings of the Council.

Only one nomination was received for the vacant office of Arts representative to the Students' Council. Since the eligibility of this candidate had not been established, no official announcement was made in the matter. In any case the successful candidate will not take his seat until the meeting following the date set for the election—October 27.

Estimates of the Football Club, the Students' Orchestra, and the Hockey Club were presented and adopted.

The following were present: Frank B. Common, M.A., president; D. C. Smelzer, Track Club; W. H. Gerrie, Athletic Association; J. W. Rooney, Hockey Club; T. M. Richardson, Medicine Representative; A. H. Greenwood, Football Club; H. R. Morgan, McGill Union; S. J. W. Liddy, Science representative.

BALKAN STATES GAIN STRENGTH AT TURKS' LOSS

Balkans No Longer Pawns in Hands of the Germans.

DR. COLBY'S THIRD LECTURE

Outlines the Important Part Played by South Eastern Europe in the War.

Conditions existing in south-east Europe, when the war storm broke, were described by Dr. C. W. Colby, in the third lecture in his course on "Europe at War," delivered at the Royal Victoria College yesterday afternoon. In opening, Dr. Colby declared that it was fitting that the occasion for the war should arise in the Lower Danube, which above everywhere else in the civilized world was a region of acute danger. Turning to the development of the Balkan situation, Dr. Colby stated that after the creation of Italy and Germany as modern states, south-eastern Europe alone remained unorganized. Both Italy and Germany had, previous to this, been in a fragmentary state, and their consolidation proved a stumbling block to other states desiring expansion. The Hapsburgs of Austria, were the chief sufferers through this, since their only avenue for expansion was through the Balkan region.

The ancient desire of Russia to secure a foothold in the Balkans, and the part which Russia played as "big brother" to these states oppressed by Constantinople, was another cause of discontent in southeast Europe. In the early part of his reign Nicholas II ran a grave risk when he committed Russia in 1894-1904 to a thrust towards the Pacific. He practically tied his own hands so far as southeast Europe is concerned, at a time when the Germans were endeavoring to secure control of the situation.

The Turks' Oppression.

The growing importance of the Balkan States following their emancipation from Turkish rule was dealt with by the lecturer. The Balkan states were, prior to the Congress of Berlin, in swaddling clothes, but since then there has been a rapid advance owing to the growing weakness of Turkey. The result is that the Balkans have become ambitious, and have refused to act as pawns in the chess game of Europe. There has arisen the impression that the Balkan states do not exist for Germany, for Austria or for Russia, but for the Balkans themselves.

Speaking of the hatreds which have existed between the Bulgars and the Serbs as the most fierce. The territories of these two countries are more important to the great Powers than either Greece or Rumania, on account of the advantages in communication. Austria has long coveted the Morava valley, and has endeavored to gain possession of Salonika to them not only a mere commercial point, but also the site of a fortified naval base.

Dr. Colby followed the labyrinth of the Balkan situation through the development of Turkey, taking up the three elements which entered closely into the situation—the Turks, the Balkans and the Great Powers. Through the interaction of these three arose the Eastern Question.

During the Turkish occupation of Macedonia, the Bulgarians and Greeks were constantly making demonstrations against them, and also fighting with one another with Salonika as their objective. In the early part of this century the condition of Macedonia was truly pitiful, and the Balkan League was formed by Bulgaria and Serbia to drive the Turks from this territory, as they held that the Great Powers had not helped matters in the past, and were not likely to do so in the future through jealousies. In this project Bulgaria and Serbia succeeded in gaining the help of Montenegro and Greece. It was difficulties which ensued. It was evident, Dr. Colby stated, that the Germans and Austrians who were behind the Turkish army did not attempt to avert the struggle, but rather welcomed the war, as they were confident it would reveal the strength of the Turkish army and wear down the efficiency of the other participants. Contrary to this opinion, the Balkan allies gained more territory than they had hoped to conquer, due to the Turkish collapse, a circumstance which proved a most disagreeable revelation to the Teutons.

In this predicament, Berlin and Vienna did all in their power to stir up strife among the successful allies. A disagreement between Greece and Bulgaria in the matter of the distribution of the territory taken from the Turks proved the cause of the second Balkan war. Without making any declaration of war, the Bulgarians attacked the other Balkan states involved, but emerged from the struggle with less booty than they would have retained under the original agreement.

Dr. Colby concluded his lecture with a discussion of the Albanian attitude in the Albanian question, and of the aims of the Germans and Austrians in the East.

CLIP FRESHMEN'S HAIR.

Freshmen at the University of Arizona have objected to the humiliation of having their hair clipped close by the sophomores. In the first skirmish several sophs lost their superfluous hair to the freshmen.

STUDENT EDUCATORS.

It has been frequently said that "parents send their children to school to be taught by the teachers, but the scholars really educate themselves." Adding to this the usual grain of salt we find on digestion that the statement contained a certain amount of truth, and from school we can ascend to the college and the university.

That there is an education necessary and useful which cannot be had from books is a fact that we think will be generally admitted. No doubt, books are at once our friends, companions and instructors. They are our delight when prosperity happily smiles, and our inseparable comforters when adversity threatens. They are the legacies of genius which are felt to mankind to descend generation after generation, instructing the mind, softening the heart and elevating the soul. But is there anyone who has spent his life with books that has not at some time observed wisdom without history, subtlety without mathematics, depth without natural philosophy, gravity without morals, and ability to argue without rhetoric or logic? And this is no mystery, for the men in whom these things are found know much because they have lived much. So indeed it is with the student. The rough, and inexperienced youth, though invariably treated with kindness and respect, has still much to endure on entering college. But in a few months this is all over; the polishing, the squaring, the rounding off is finished and he emerges a wiser and a better man. His relations with those around him are completely altered. He has learned for the first time the true and practical significance of patience and perseverance. When this stage is reached the real course of student education begins.

The students of McGill, coming as they do from different parts of the Dominion, and in fact from the adjoining Republic, bring with them the customs and habits of their people, some of which they not only retain intact, but even persuade the student body to adopt, while others they sacrifice in acquiring better. Perhaps one of the most common grounds of conflict is that of nationality. A love of country is a commendable feature in everyone, but it should not be carried to such an extreme as to become national prejudice, which is one of the greatest obstacles to real progress. The most effective remedy is mutual intercourse, and in no other place can this remedy be applied half so easily as in college, for there the students from the very nature of their work are forced to co-mingle, to speak and live together. They form their own societies, choose their own officers, and play their own games. They meet to discuss, to plan and to encourage. In short they govern and are governed, they respectfully command and obey, and all this cannot but produce the most desirable effects. Not only do natural prejudices cease, but attachments strong and enduring are formed where they are the least expected.

Our great need in life is not so much something to do, as a true and reliable friend who will incite us to do all that we can. Some people are of the belief that unless a student is pouring over his books he is idling away his time. An active, vigorous, inquiring mind can never be said to be idle. The greatest idea often come to us during our moments of recreation. It was thus that Watt, as he sat in his chimney corner, apparently idle, discovered the application of steam. So of Newton and the laws of gravity. Do not let us therefore say that boys are wasting their time if they occasionally abandon their books for the more pleasing exercises of the campus.

EDITORIAL NOTES.

The motion passed by the Students' Council at its regular meeting last night sets at rest a discussion which was given a great amount of prominence last year among the students. It was agitated at that time that the Council in conducting its meetings behind closed doors was not acting in the right spirit. The Council met this plea by holding one open meeting a month. It will be remembered that at the first of these open meetings only one student who was not a member of the Council attended. Later on this attendance increased somewhat. According to the latest ruling every regular meeting will be an "open" meeting and undergraduates will be allowed to attend but not take part in the discussions. The rule has its advantages. Students will be able to see that men whom they elected are attending to the affairs of the faculties which they represent and rulings of the Council may not come in for criticism when it is known what discussion preceded their adoption.

There seems to be some misapprehension on the part of the Theological students about the University as to their standing in the C.O.T.C. This has probably arisen from the fact that they are not, unlike the others of the University, required to take the drill. In an interview with Capt. Simpson, the Adjutant of the Battalion, he praised the work of the platoon of theologians, in last year's battalion in the highest possible terms and characterized them as very hard-working and efficient. He wishes the Theological students to understand that he is exceedingly desirous of having as many of them in this year's battalion as possible, as he believes them to be a fine addition to the organization. The Theological students will drill with the fourth company.

LIFE INSURANCE.

The year 1843 saw the beginning of life insurance as it exists in the United States to-day. It has since grown to be the most gigantic business structure of all time. With but a modest beginning, in a new and untried world, life insurance came into being. The millions paid to beneficiaries since that time stand as a heroic monument to the courage, the foresight and splendid judgment of those who labored in the beginning.

Belle—They say that Jimmy makes me approach than any man in the world. I should say he does! The time I met him I lent him twenty dollars.

LESS WHISKEY NEXT YEAR.

By an arrangement between the British Government and the whiskey distilling industry in regard to the coming season's output of the Scotch and Irish distilleries, the Scotch distillers will be restricted to an output of 70 per cent. on the last five years' average production of malt whiskey. The arrangement in Ireland is practically a 30 per cent. reduction on last year's output. This arrangement does not include the large grain distilleries in neither country, which are at present working almost exclusively on spirits for war purposes. It is understood that the main object of this restriction is the saving of shipping tonnage, to be utilized for the importation of food products and other necessities. Normally a large quantity of foreign barley is used for the distillation of spirits.

THE EDITOR'S MAIL.

ED. NOTE.—While we have two supposed authors of the story "If," published by the "Daily" last week, answering to Phryne's letter, the one signed "Frankenstein" is from the author of the story. The other is undoubtedly from an imposter, very probably, the representative of some matrimonial agency, as the context would seem to imply.

My dear Miss Phryne.—As Moses said in the beginning, "All men are equal," and as the whale is the largest amphibious animal, I venture to take my pen in hand.

I am of a poetic and affectionate nature, with a human weakness for the peroxide brand. (I rather from the tone of your letter that you are one of those passionate blondes). I don't like your name—it calls up vaguely unpleasant associations, but that can easily be changed. When I know you better, I shall call you Priscilla, that having a more moral sound.

Will you meet me on the steps of the Engineering Building at noon on Wednesday, wearing a yellow tulip. You will know me by the red rose in my button hole. Object, matrimony. Yours, yours alone, ARDENS.

P.S.—Don't forget to bring your own carfare.

Dear Phryne.—Your letter, which is full of a not unpleasant flattery, was a complete surprise to me. Persons who think for themselves are always rare—especially in a university. There are all sorts of people in McGill; people who play football, and people who read books, and people who act plays, and people who win medals; but not—people who think. And therefore I hope you will not change your mind, but will write to me as you promised to do. In my letters I shall talk a great deal about books—about arts and science and books—about men and women and books—about "cabbages and kings," and anything else you like, and books.

I was particularly surprised to find that you were an admirer of Tolstoy. Most young ladies attend lectures in English literature, and read writers with whom matter is less important than manner. Tolstoy is different; his matter is so original that his manner doesn't matter. Yet his savage vigor and his semi-Semitic philosophy are scarcely what would appeal to the average woman. One R. V. C. student, with unconscious quaintness, said to me: "Tolstoy reminds me of Victoria Cross." You know, I presume, who Victoria Cross is. And you, a woman, like Tolstoy. Strange! In fact I am beginning to doubt whether you are a woman at all, for your style is decidedly masculine. However, it is no affair of mine.

What puzzles me most about Tolstoy is his belief in survival after death, although he must have known that psychologists considered this an outworn superstition. Now I myself rejected this belief years ago, and for a reason which most people never think of. I will tell you what I mean. There is a fact which we all shut our eyes to, and that is the inequality of human beings. Life is like a great orchestra, in which someone must act as leader and someone must play the drum. Why can't we all be first violins? Emerson is one of the few, the very few, writers who have noticed this. "The radical tragedy of nature seems to be the distinction of More and Less. How can Less not feel the pain; how not feel indignation or malevolence toward More?" I think Less does feel the pain, only he tells himself—poor soul! what else can he do? that life is short and it is better not to think of such things. If the human personality does not die, however, Less will continue to feel the pain through all eternity. Don't you think that immortality is a most undesirable, a most fearful thing? If you are a theist you cannot believe in it for God would not be so cruel. If you are a pantheist you must not believe in it, for (to quote Emerson again) "I am my brother and my brother is me," and we are all parts of one great Whole—I guess I'd better stop right here, for you must be getting tired of this. Oh, yes! There is something else I intended to say. You talk as if you had made a study of the revolutionary economists. May I ask you to expound some of their principles to me? What is socialism? What are the arguments for and against it? (Do you see there are some things I do NOT know.) For the present I shall sign myself, FRANKENSTEIN.

McGILL AT WAR.

No more the plugging line of red and white, Wins mud and glory as on fields of old; Silent the stand whence rosters' an-thems roll'd, As heaved and charged the heroes in the fight...

Sober, not sad, they who now claim Her right; Proud in the thought of what these years have told Of many sons who, leaving Her safe fold, Went forth to bleed for Freedom's sacred light.

Well may we dream of deeds the Past has known, For name alone is in us here to-day, And Her true might is striving far away.

Forever where the Empire's flag is blown, Heading thro' war's red night toward peaceful dawn, The men of Old McGill toil gladly on.

MEMORIAL TO KITCHENER.

LONDON, England.—The King's reply to the address of the House of Commons in favour of the erection of a monument to Lord Kitchener was as follows:

I have received your address praying that I will give directions for a monument to be erected, at the public expense, to the memory of Field-Marshal Earl Kitchener, with an inscription expressing the admiration of the House of Commons for his illustrious military career and its gratitude for his devoted service to the state, and assuring me that you will make good the expense attending the same. I will gladly give directions to carry into effect the proposal to do honor to a most distinguished servant of the state, who has achieved so much for the country in this great crisis of its history.

Wife—This paper tells of a man, out in Ohio, who lives on onions alone. Hub.—Well, anyone who lives on onions ought to live alone.

CHINESE PROFESSOR IN OTTAWA.

OTTAWA, Ont.—An interesting visitor to Ottawa is Wing Kwong Chung, M.A., dean and professor of Chinese at the Canton Christian College, located near the city of Canton, China. Professor Chung, says the Citizen, is passing through Ottawa on his way home to China after having spent two years in the United States and Canada. For the first year of his visit he studied higher education at Columbia University, New York, and afterward travelled extensively on the American continent, visiting the colonies of Chinese and getting them interested in the work being done for the benefit of the future Chinese peoples by such institutions as the Canton Christian College. Professor Chung found his emigrant countrymen greatly interested in what he had to tell them, and he had no difficulty in forming chapters in each city, the objects of which were to work for the support of the college.

In speaking to a Citizen reporter, Professor Chung referred to the 600 Chinese students who were scattered throughout Europe studying at colleges at the outbreak of the war. Many of these desired to come to Canada, but could not owing to the restrictions imposed by the Canadian Government on Chinese student emigration. Professor Chung said he was deeply sorry that such enforcement was enacted by the Government.

"Western education has made wonderful progress among the Chinese people during the past 15 years," said Professor Chung. "I am not speaking of southern China, but for the whole of China, for the north, like the south, has come to realize the immense benefits of western civilization. The expansion is due to the wonderful work of the Christian colleges, and to the knowledge carried home by the hundreds of Chinese young men who go abroad to study, and come home to become teachers, doctors or lawyers."

Professor Chung said there are over 1,000 Chinese students in the universities of the United States.

JANITOR CHANGES RESIDENCE.

John Hennelly, formerly janitor of the New Medical Building, and now janitor of the Old Medical Building, has changed his address from 280 Hibernia St. to 73 Coleraine St., Point St. Charles.

NEW MARCONI INVENTIONS.

LONDON, England.—Presiding at the annual meeting of the Marconi Wireless Telegraph Company, held recently, Godfrey Isaacs said that Mr. Marconi's invention of a simple installation to put an end to all danger of collision at sea in darkness or in fog represented but a part of his latest work. His new inventions would prove as epoch-making in the progress of the art of wireless telegraphy as was the now world-famous patent known as the four sevens of 1900. Mr. Marconi had recently visited Great Britain and described to Godfrey Isaacs the nature of his new research work in Italy, which concerns new developments in the practice of wireless telegraphy and telephony over both long and short distances. A shareholder remarked that those who watched the papers could see that the premium for war risks for shipping had decreased by two-thirds. "We don't know what the reason is," he added, "but there is."

FEDERAL SUFFRAGE IN CANADA.

If the women of the United States do not hurry their sisters in Canada will have the ballot first. Like our fellow country, equal suffrage has so far flourished in the western provinces only, but the indications are that before long all of the dominion, save Quebec, and those on the seaboard, will grant the franchise to the women. Several Ontario politicians are reported to have been won over, and others are wavering. The Globe of Toronto says that Parliament is under no constitutional limitation as to suffrage, and a dozen words in the form of a statute would safeguard the right of women to vote at federal election in provinces in which they vote for members of the legislature.

The number of members allotted to each province is fixed not by the number of voters, but by the total population in relation to that of Quebec, which has sixty-five members. The war is in part responsible for the suffrage agitation in Ontario, the women, in common with those of England, feeling that their sacrifices and work have entitled them to a larger share in deciding public matters. It is not expected that suffrage will make any headway in Quebec, however, as the conservative character of the people is decidedly against the extension of the vote to women.—Chicago Tribune.

CANADIAN BUILT SHIPS.

The Canadian Government is making every effort to increase the merchant fleet and to create broader markets for British Columbia's lumber. In lumber there has been a serious shortage of ships. Under the recent British Columbia Shipping Bill, ship-owners are granted a subsidy for ten years, to be paid in annual instalments not to exceed \$5 per ton, to bring the earnings of ships so built up to 15 per cent of the total cost.

According to Vice-Consul Woodward, Vancouver, H. W. Brown and Co. of Vancouver, has taken advantage of this situation and has contracted for the construction of eight 225-foot lumber-carrying vessels to cost about \$165,000 each, to have a speed of seven knots and a capacity of 1,500,000 feet of lumber. It is estimated there are 25 similar vessels under construction at Vancouver for other companies.

Freight on a cargo of 1,500,000 feet from Vancouver to Great Britain would cost \$122,500. Allowing 50 per cent. for operating expenses, the cost of these ships would be made in slightly over two voyages.

"My wife and I," said the little man to the subscription clerk, "are going to spend a few weeks with her people at Blank's Corners, and I want you to mail my paper to me."

"Yes, sir," said the clerk. "What name, please?"

"Well—er—to make sure of my getting it I guess you had better address it: 'Mary Blank's husband, Blank's Corners, Pennsylvania.'"

"I don't think we ought to do that. We can't afford it."

"I know we can't; but we can't afford to let anybody know that we can't afford to do it, either."—Detroit Free Press.

LORD DERBY ON THE WAR.

LONDON, England.—In a recent interview, Lord Derby, Under-Secretary of State for War, discussed the attitude of the British people toward the present conflict, and the work of the British army in the field. Lord Derby expressed the utmost confidence in the ultimate issue of the war and testified to the enthusiasm of all ranks and classes of the army fighting for that issue. He also emphasized the complete unity of the nation in the support given to the army.

Dealing with the aims of the war, he remarked that the objects of Great Britain in the war were well known to all the world, including the United States. They were not fighting for any territory in Europe—their object was simply to prevent the Prussian type of conduct exemplified in the sinking of the Lusitania, the atrocities in Belgium and other places, and the starving of prisoners of war, in all of which German responsibility has been definitely proved by observers of non-British nationality, from dominating the whole world. The United States, he proceeded, is vitally interested in this aim, and England will require American help in achieving it, not only during the war, but afterwards, to render such occurrences as I have named from happening again.

In this country all classes are united in pursuance of this aim, Lord Derby confidently continued. The war has healed up all disagreements in face of the common danger. Mr. Redmond's recent statement in the House that his attitude towards the war was unaltered and unchangeable, is typical of the whole nation's unity. "If I myself had been told two years ago that I should be working with Mr. Lloyd George in the War Office I should have been skeptical. Now we have only one object—to work for the successful prosecution of the war."

Touching upon the Irish question, Lord Derby said the settlement being made was a piece of domestic detail purely and simply. "I am sorry," said his Lordship, very earnestly, "extremely sorry that the recent rebellion occurred, and all the more so that it may give neutral countries the impression that there is disunity in our country, which is far from being the case."

Lord Derby was enthusiastic in his undisguised admiration of the spirit of confidence among the British troops in the field. He had, he said, been out to the front only a fortnight previously and had seen many of the new armies at work, especially those from his own county of Lancashire, for whom he had a slight, and he maintained legitimate, partiality. His Lordship gave his opinion that voluntary soldiers made better fighters than those obtained under a conscript system. In spite of the fact that he had always been a keen advocate of a system of national service, yet he was convinced of the superiority of the man who came forward as a soldier of his own free will. In the British army, he went on to say, the proportion of conscripts was very small, less than 10 per cent, but when the British soldier was compared with the German, it could easily be seen that the volunteer was superior man for man. What was lost in discipline through the short training of the volunteers was fully compensated for by increased keenness. This important factor in the course of 15 months had enabled a British artillery, formed of men who were previously clerks and commercial men, to be trained to such a high state of efficiency that they were the admiration of their French allies.

CURIOS PIECES.

In a paper written for the Spectator of June 1, 1711, Addison speaks of the value which he set by odd bits of printed paper on which he had often chanced upon some fragments of literary merit. He says, following on the Latin quotation with which he invariably introduced his articles: "It is the custom of the Mohammedans, if they see any printed or written paper upon the ground, to take it up and lay it aside carefully, as not knowing but it may contain some pieces of their Alcoran. I must confess I have so much of the Mussulman in me, that I cannot forbear looking into every printed paper which comes in my way. I am no mortal author in the ordinary fate and vicissitude of Things knows to what use his works may, some time or other, be applied; . . . (I) know a Friend of mine who, for these several years, has converted the essays of a man of quality into a kind of Fringe for his Candlesticks. . . . I once met with a page of Mr. Baxter under a Christmas Pye. Whether or no the Pastry-Cook had made use of it through chance, or waggery, I know not; but upon the perusal of it, I conceived a good idea of the author's Piety, that I bought the whole Book. I have often profited by these accidental Readings, and have sometimes found very Curious Pieces, that are either out of print, or not to be met with in the Shops of our London Booksellers. For this Reason, when my Friends take a survey of my library, they are very much surprised to find upon the shelf of Follies, two long Bandboxes standing upright among my Books; till I let them see that they are likewise of them lined with deep erudition, and abstruse Literature. I might likewise mention a Paper-Kite from which I have received great improvement; and a Hat-Case, which I would not exchange for all the Beavers in Great Britain. This, my inquisitive Temper, or rather impertinent Humor of prying into all sorts of writing, with my natural aversion to loquacity, gives me a good deal of employment when I enter any House in the Country: for I can't, for my Heart, leave a Room before I have thoroughly studied the walls of it, and examined the several printed Papers which are usually pasted upon them. The last Piece that I met with upon this occasion gave me a most exquisite Pleasure. My reader will think that I am not serious, when I acquaint him that the Piece I am going to speak of was the old Ballad of The Two Children in the Wood, which is one of the Darling Songs of the Common People, and has been the delight of most Englishmen in some part of their Age."

UNIVERSITY OF WASHINGTON.

Photographs taken from a biplane in flight over the University campus are being used by John William Miller, assistant professor of civil engineering, to establish the harbor line of Lake Washington along the lower part of the University property. The snapshots were taken by Professor Miller himself. He has long been interested in aviation and the commercial possibilities of the aeroplane. His flight was made in one of the hydroaeroplanes stationed on Lake Washington.

By Order,
J. C. SIMPSON,
Captain,
Adjutant, McGill Cont., C.O.T.C.

ATHLETIC ASSOCIATION
HOLDS MEETING

Special Meeting at Which Granting of Letters is Discussed

A special meeting of the Athletic Association was held in the Union yesterday to discuss the question of granting letters for the various sports this year. The first under consideration was for the Track. It was decided that M's be granted for special merit on the same basis as those last year, in view of the fact that there is no Intercollegiate Track meet this year. This will mean that those obtaining large block letters will have to obtain the requisite number of points, times and distances being compared with those made at the sports' days of Queens and Varsity this year. It was thought that in this way it would make the letter just as hard to obtain as if an Intercollegiate meet were held.

It was also the opinion of the meeting that M's should be granted to the football players taking part in the interfaculty games. The method in which these would be awarded was left to a committee, appointed by the Association. A full announcement of the report of this committee will appear in the "Daily" in the course of a few days.

It was also the opinion of the meeting that M's should be granted to the football players taking part in the interfaculty games. The method in which these would be awarded was left to a committee, appointed by the Association. A full announcement of the report of this committee will appear in the "Daily" in the course of a few days.

REGISTRATION FIGURES.
Complete registration figures to date (exclusive of MacDonald College), give an attendance at the University of 990 students. Last year there were 1158 students registered in the same faculties.

SCI. FRESHMEN HEAR ADDRESS BY DR. HARVEY

Annual Talk to New Students by Medical Director.

DEAN ADAMS ALSO SPEAKS

Both Speakers Tender Excellent Advice to First Year Men in Engineering.

At two o'clock yesterday afternoon, the First Year Science students were privileged to hear two interesting addresses, from Dean Adams and from Dr. Harvey respectively.

The Dean first extended a hearty welcome to the First Year men. He spoke of what the University in general and the Faculty of Science in particular, had done for the country. No less than 680 Science men are now at the front. He reminded his auditors of the fact that, even though they were unable to serve their country by actually fighting for it, there was still a great deal to do at home. They must do all in their power to help along the cause of a just peace, and the cause of a good home government.

He then spoke of what University training, even in times of peace, does for a man. Men attend the University to receive a professional life training; they are, in addition, elevated to a position of leadership over their less lucky fellow-men. Studies alone should not occupy the whole of a student's time, and he should pay a great deal of attention to the attainment of an ability to command men.

The Dean then read and discussed several of the more important rules of the Faculty. He explained why each First Year student was assigned to a certain Professor, who acts as the student's adviser. This institution was more for new men who were strange to the city, but also served to bring students and professors into closer relations to one another. Advisers are not to look after the students assigned to them, but to give them help and advice whenever needed.

The 33 per cent. rule was mentioned, and explained. A First Year student, who does not obtain an average of 33 per cent. or over, in several subjects named in the calendar, at the end of the first term may not continue in the class. The Dean expressed the hope that this year the rule would not have to be put into force.

Dr. Adams then spoke of the attendance rule, by which a student is not supposed to miss more than one-eighth of the total number of lectures. Domestic affliction and cases of serious illness are the only excuses that will be accepted from absence. Breaking the one-eighth rule, otherwise the student will not be allowed to come up for his examination.

The Dean closed his address by stating that a reasonable amount of hard work by each student will assure all passing the examinations. He very kindly offered his services to any man whom he could help in any way. Dr. Adams then introduced McGill's Physical Instructor, Dr. Harvey, whom most present already knew.

Dr. Harvey's introduction consisted in a reference to the physical examination required of all students by the University. This was to promote the physical welfare of the student body, and to discover any hidden defects amenable to treatment. He mentioned the fact that 50 per cent. of those who presented themselves as army recruits were turned down on account of just such hidden defects as might be discovered in any student. For example, the eye test reveals many weak or defective eyes; diseases of the heart and lungs, hitherto unsuspected by the student, are often discovered during the examination. Dr. Harvey expressed the urgent necessity of submitting such defects and weaknesses to immediate medical treatment.

Continuing along the subject of "Personal Hygiene," the Doctor referred to diet, bathing, exercise, rest, sleep, clothing, and fresh air. Due attention must be paid to all these things in order to attain the best of health.

Speaking of a man's diet, Dr. Harvey said that, in the first place, his teeth must be in good order, and that they should be examined at least once a year. Good food is necessary, and also regularity in taking meals. A man should not take very much exercise for at least an hour before meals, and for an hour after. The quantity of food to be taken can only be decided by one's appetite, which is usually a very good guide. One's senses of taste and of smell are also

good guides as to the food to be consumed.

A man should wear just enough clothing for comfort, and this should not fit him too tightly. His collar and boots, especially, should not be tight, as many different troubles may originate from these sources. Some people, to prevent colds, wear a lot of clothing around their necks and chests, but this, Dr. Harvey considers to be a mistake. These parts of the body become heated and damp, and the subject is more liable to cold than before.

Good care of the skin is essential. Daily bathing of the right kind results in a fine tonic effect on the skin. It is a mooted question among a great many young men as to whether a hot or a cold shower is the better. Dr. Harvey stated that a cold shower of short duration, taken upon rising every morning, is excellent for one's health. A good rub-down, of course, is necessary after it. A hot shower should seldom be taken, warm or tepid water being used instead. A cold bath is a splendid preventive of colds.

A proper amount of exercise is a necessity and has a very beneficial effect on a man's health. Exercise should, if possible, be taken in the open air, but, of course, it is often necessary to take it indoors.

Referring to rest and sleep, Dr. Harvey stated that eight or nine hours' sleep per day was necessary in order to keep in good health. All the fresh air possible must be obtained, and as much of a man's time as possible spent in the open air. At night the window should be kept open to assure an adequate supply of fresh air.

The Doctor then spoke of a few preventable diseases. Among them he included typhoid fever. Although there had been several epidemics of this disease in Montreal, the tap water supplied now was, in his opinion, safe enough for human consumption. In concluding his address, Dr. Harvey stated that the C. O. T. C. work would be made light enough so that students taking the work who could not have passed a regular military physical examination would not find it too much for them. The Doctor offered to aid any of the students if his services could be of use to them.

R.V.C. NOTES.

R. V. C. '17 HOLDS MEETING.

At a meeting of R.V.C. '17 yesterday, Misses Patton and Jackson were elected to uphold the class in the first of the Inter-Year debates. Miss Fletcher informed the meeting that Arts '17 were filling Xmas boxes to send to their class mates at the front. Their president had inquired whether R. V. C. '17 would be willing to knit socks for the purpose. After some discussion it was moved and carried that Miss Fletcher should find out how many pairs of socks were needed, at what date they should be ready, and if R. V. C. '17 could help in any other way towards further supplies.

CORRECTIONS OF DATE.

A meeting of the Partial Society of the R. V. C. will be held on Wednesday at 10 o'clock (not 1 o'clock, as before stated). The change is due to the fact that lectures are suspended after 10 o'clock.

The R. V. C. tea room will open on Monday, October 23rd, (not the 20th).

R. V. C. '18 MEETING.

A meeting of R. V. C. '18 was held in the Common room at 1 p.m. yesterday, with Miss Florence Walker in the chair.

The chief business was the election of debaters for the coming Senior-Junior Debate. Those returned were Miss Grace Gardner and Miss Lois Fowler.

DELTA SIGMA SOCIETY.

The final rehearsal of those taking an active part in the Opening of Parliament will be held on Tuesday at 5 o'clock. Everyone make an effort to be there, as it is important to have the entire cast present.

LOOKS LIKE INITIATION, GIRLS!

There is a notice on the Y. W. C. A. (?) board of the R. V. C. to the following effect: "All freshmen must come Friday morning, October 20th, 1916, at 9 a.m. sharp, to the English room. Strictly no admittance to the basement after 12 p.m. Thursday. They (presumably the Freshies), must wear gym suits, shoes, etc., and carry old night-dresses and green sashes, also as large a handkerchief as possible. No hair ornaments or jewellery to be worn. Try to learn to swim before hand. By order of the Sophomores."

Spanish classes at the University of Wisconsin have enrolled more than 700 students this year as compared with less than 500 last year. The increase this year is almost 45 per cent., and that of last year was about 40 per cent.

Other universities throughout the country report a similar increase in enrollment in their Spanish classes. In the University of Wisconsin Spanish was this fall put on an equal basis with German and French in the fulfillment of the language and study required for the B. A. degree.
